

Exercise 2 and 3: I made both exercise in a single file .l and .y

In the file *problem.l* I wrote what should do the translator and what symbols to take in consideration and a function yywrap.

In the file *problem.y* I defined the tokens, rules and 2 functions: yyerror and main (where I open the files).

The input is provided using the file input.txt and the output is providing using the output.txt
