

Exercise 1: Try to build the parse tree for the above exercise, using the trace output from lexical and syntax analyzers.

Indication: You'll have to start building the parse tree from the bottom (the *tokens*) and proceed towards the *goal* (the *start symbol*)

I started by extracting the tokens from the 2 given files: ex1_2020.l and ex1_2020.y : INT ID EOL. Using the rules from the ex1_2020.y, I built the parse tree starting from bottom.
